TRACKING INCREASING OFFENSE ON THE PENALTY KILL

From a presentation at
the RIT Sports Analytics
Conference, 9/14/2019
Slides available at the link

Over the past several seasons, offense has been increasing on the 5v4 penalty kill. This is true whether you look at the **share** of offense or the **rate** of offense (per 60 minutes) for the penalty killing team.

This change is not solely being driven by a small handful of teams. Looking at the unblocked shot attempt share over time, only a few teams have been dropping, while several have been rising. Last season, Columbus set a new recent-era record at 24%.
